Aquaponic - The Revolutionary Farming  
Crossing Fish & plants Together

• Introduction -  
Aquaponic is a food production system that couples aquaculture with hydroponic whereby the nutrient rich aquaculture water is fed to hydroponic plants.  
The main aim of aquaponic system is to create plant growth using aquatic animal waste. Consequently, aquaponics uses the fish water as fertilizer for plants while the plants clean water for the fish. This mutual relationship between the plants & Fisheries helps nurture both hence producing high yield & ultimately a good income.

• Objectives:

1. Demonstrate feasibility of an aquaponic system under a controlled environment using less resources.
2. Quantify the business inputs & outputs of the system.
3. Explain the sustainable & profitable qualities of aquaponics as a business model.
